

High speed Internet
for everybody

WIMAX in Nièvre

Our high speed local network combines a 570 km fibre-optic backbone with WiMax technology

In May 2008, Niverlan was granted a WiMax licence (in the 3,5 Ghz spectrum) by ARCEP (the French telecom regulator).

- Niverlan is the most committed license holder on this technology and is **number 1 in France** according to the latest ARCEP report as it has fulfilled 100% of its obligations.
- **Niverlan chose 802 16 e Standard**, anticipating mobile WiMax not yet authorized in France.
- So as to cover "*digitaldead zones*" with high speed Internet (2 Mbts) in rural and semi-urban areas, **Niverlan installed 53 WiMax base stations**. WiMax is cheaper to install and more efficient in terms of infrastructure and energy. "*Compared to LTE, WiMax is already available whereas LTE is years away*".
- At the moment two WiMax operators offer all-inclusive packages (Internet and VoIP) and the number of **new customers has increased by 15 per week** since they started up last November.
